EXPERIENCE

BrainBox AI

Toronto, ON

Software Developer

March 2023 – Present

- Automated the cleansing and standardization of 60M+ rows/month of raw temperature-sensor telemetry, reclaiming ~8 engineer-hours per building each month and eliminating a week-long processing backlog
- Architected an AWS ECS scheduled task that consolidates multi-source telemetry from 5,000+ smart buildings and delivers daily algorithm-health CSVs to ops teams, cutting incident response time by 40%
- Built a pdfplumber and RegEx parser that ingests energy-bill PDFs into MySQL, replacing 10+ hours/month of manual entry and driving data-entry errors below 1%
- Designed a GitLab CI end-to-end test framework that spins up full building-simulation environments in Docker, catching integration failures before merge and raising deployment success from 88% to 98%
- Partnered with data-science and DevOps teams to establish automated code-quality gates (pytest, flake8), standardizing testing practices across the team
- Cut pipeline runtime by 35% by parallelizing data transformations and introducing incremental loads

KitchenMate

Toronto, ON

Data Analyst Intern

Sept 2021 – Dec 2021

- Built a live performance dashboard in Tableau that surfaced key sales and usage metrics and helped close a contract with Keurig
- Developed a Python tool to automate resume screening, saving recruiters 10+ hours per hiring cycle
- Wrote SQL queries to extract and clean order and machine-usage data across 40 locations, standardizing it for weekly reporting
- Analyzed customer ordering trends to surface peak-demand windows, informing inventory recommendations

Loblaw Companies Ltd.

Toronto, ON

Software Developer Intern

Sept 2020 – Dec 2020

- Developed and deployed an inventory-control web app that cut 15+ hours/week of manual tracking for store managers
- Designed and built responsive, interactive UI pages in React from Figma mockups
- Built REST API endpoints to serve inventory data to the internal dashboard, reducing average page load time by 30%
- Wrote unit and integration tests with Jest, raising coverage on the inventory module to 85%

EDUCATION

Georgia Institute of Technology

Atlanta, GA

Master of Science, Computer Science

Sept 2024 – Present

- Relevant Coursework:** Machine Learning, Graduate Algorithms, Database Systems, Computer Networks, Artificial Intelligence

University of Waterloo

Waterloo, ON

Bachelor of Accounting and Financial Management

Sept 2017 – Apr 2022

SKILLS

Languages: Python • JavaScript • SQL • Bash • VBA

Frameworks & Testing: React • Flask • Cypress • Selenium • Puppeteer • Locust • pytest

Data & ML: pandas • NumPy • scikit-learn • Plotly • Tableau

Infrastructure & Tools: AWS • Docker • Terraform • GitLab CI • MySQL • Netlify • Heroku

PROJECTS

March Madness Bracket Predictor

[View on Github](#)

- Built a full-stack, drag-and-drop March Madness bracket app (React + Plotly) on a serverless Google Cloud Functions backend
- Trained a Random Forest and Logistic Regression ensemble on 20+ years of NCAA tournament data (2003–2024), reaching 73% accuracy on the 2024 bracket
- Engineered 25 predictive features from team stats (seed, scoring margin, tempo) and validated the model with 5-fold cross-validation

Random Forest-Powered Trading Engine

[View on Github](#)

- Developed a Python trading bot driven by a 50-tree Random Forest, engineering technical indicators (RSI, MACD, moving averages) as features
- Achieved an 11% return versus 1% for a buy-and-hold benchmark across 10 years of back-tested data
- Built an automated back-testing framework to simulate trades and evaluate strategy performance on historical price data
